AI Summary

This dataset contains information about artisans and their crafts. It includes details such as the artisan's ID, name, craft type, location, a brief biography, and image URLs. Additionally, it captures the artisan's rating, contact information, and the date they were added to the dataset. This data can be used to explore artisan profiles, analyze craft types by location, and understand artisan performance through ratings.

Column Breakdown

Type	Columns
Numeric Columns	artisan_id, rating
Categorical Columns	name, craft_type, location, bio, image_url, contact, date_added
